AI Overview

A file naming system is a set of rules used to name and organize computer files. Good systems use clear text, dates like `YYYY-MM-DD`, and numbers so people and computers can find and sort files fast. YouTube · Simpletivity +2

Best Rules for Naming Files

- Use letters and numbers.
- Use hyphens (-) or underscores (_) instead of spaces.
- Write dates in year-month-day order (like `2026-07-31`).
- Keep names short and clear.
- Use zero-padding for numbers (like `01`, `02`) to help sorting. YouTube · Simpletivity +4

What to Avoid

- Do not use blank spaces.
- Do not use special symbols like `?`, `*`, `<`, `>`, or `/`.
- Do not make names too long. YouTube · Skill Foundry +2

Name File System (NameFS)

A NameFS file system **is a purely logical entity**. It exists only during the time it is mounted, and serves only as a means of grouping files for logical reasons.

Creating and Maintaining File Naming Standards

Short **file names** are preferable because a long **file name** means a long **file** path or, when posting a document on the web, a long URL.
